B. Tech.

(SEM. IV) THEORY EXAMINATION, 2014-15

OBJECT ORIENTED PROGRAMMING WITH C++

Time : 3 Hours]

[Total Marks : 100

Note : Attempt All Question. All Questions carry equal marks.

1 Attempt any four questions : 5×4=20

- (a) What is object oriented methodology ? Discuss the various stages in it.
- (b) Discuss the importance of data abstraction and encapsulation with real time example.
- (c) What is a class template ? How does it differ from function templates ?
- (d) What do you mean by aggregation ?
- (e) Prepare a portion of an object diagram for a library book checkout system that shows the date a book is due and the late charges for an overdue book as derived object.

- 2 Attempt any four questions : 5×4=20
- (a) Discuss the concept of state generalization with suitable example.
 - (b) What is meant by an abstract class ? Why is it required ?
 - (c) In which order the constructors and destructors are executed ? Explain with example.
 - (d) Can a friend function be a member of a class? Yes/No. Support your answer with example.
 - (e) Can a class have more than one constructor ? If yes then how ?
 - (f) Write a C++ program for the following specification
Class : AddressBook
Data Member : Name,Address,PhoneNo.,Email, Relationship
Member Function : InsertData(),DisplayData(),SearchPhNo()
- 3 Attempt any two questions : 10×2=20
- (a) What do you mean by function overloading ? Write a program to implement, +,, operator overloading.
 - (b) Bring out the relationship between Base Classes and Derived Classes and also explain the working of constructors and Destructors in derived classes.
 - (c) Write a program in C++ to read from the file "example.text" and write into the file "system.text". Kindly use the function to open() and Close().
- 4 Attempt any two questions : 10×2=20
- (a) Write a program in C++ to calculate the frequency of vowels of a given sentence. Also display the vowel with highest frequency.

- (b) What are virtual functions ? Base class has some virtual method and derived class has a method with the same name. If we initialize the base class pointer with derived object, calling of that virtual method will result in which method being called ?
- (c) Explain the following terms, with example :
 - (i) Dynamic model
 - (ii) Nested diagram
 - (iii) Links
 - (iv) Association.

5 Attempt any two questions : 10×2=20

- (a)
 - (i) Write a program using a try block to default and throw an exception if the conditions "divide-by-zero" occurs.
 - (ii) Discuss briefly various exception handling options.
- (b)
 - (i) How is const used with pointers ?
 - (ii) Implement friend functions and friend classes. With an example. Highlight the privileges enjoyed by friends.
- (c) Give a detailed description of the concepts of exception handling with specific reference to the concepts of rethrowing an exception, exception specification etc.
